Fagron TrichoConcept™

The TrichoConcept™ compatibility table shows an overview of compatible APIs and DCIs in the broad range of compounding vehicles. The compatibility has been assessed based upon stability studies and stability tests. Tests were performed by evaluation of physical factors like organoleptic characteristics, pH, color change, homogeneity, phase separation, odor, viscosity, drug settling, foam capacity and skin feel. The beyond-use date has been assessed combining this information with available literature regarding the chemical stability.

Disclaimer: While a great deal of effort has been spent to ensure the accuracy of the dosages and formulations contained herein, no claims are made as to the uses, safety, efficacy or bioavailability of these recommendations. The content of this table cannot be construed as being a (medical) advice, recommendation or opinion. Medical professionals, doctors and compounding pharmacists using this information are advised to do so solely if appropriate in their own professional opinion and judgement. Fagron does not accept and cannot be held responsible or liable in any case for the formulation or information contained herein.

Compatibility table

TrichoConcept[™] compounding instructions

Compounding with TrichoConcept™ is simple and easy. In this flowchart you can find the compounding steps for the most common formulations prescribed in TrichoConcept™ vehicles.

Compounding steps for most common TrichoSol™ and TrichoFoam™ formulations

Please refer to the TrichoConcept™ Formulary and Fagron's Compounding Matters database at fagron.com for all compounding methods and storage conditions. TrichoConcept™ vehicles allow for stable preparations with a broad range of APIs and DCIs. Combinations that have been scientifically studied for chemical, physical and microbiological stability are included in this TrichoConcept™ compatibility table.
